Laboratory experiences as a part of most U.S. high school science curricula have been taken for granted for decades, but they have rarely been carefully examined. What do they contribute to science learning? What can they contribute to science learning? What is the current status of labs in our nation's high schools as a context for learning science? This book looks at a range of questions about how laboratory experiences fit into U.S. high schools: What is effective laboratory teaching? What does research tell us about learning in high school science labs? How should student learning in laboratory experiences be assessed? Do all students have access to laboratory experiences? What changes need to be made to improve laboratory experiences for high school students? How can school organization contribute to effective laboratory teaching? With increased attention to the U.S. education system and student outcomes, no part of the high school curriculum should escape scrutiny. This timely book investigates factors that influence a high school laboratory experience, looking closely at what currently takes place and what the goals of those experiences are and should be. Science educators, school administrators, policy makers, and parents will all benefit from a better understanding of the need for laboratory experiences to be an integral part of the science curriculum-and how that can be accomplished. The Teacher pages include Standards addressed in each lab, a vocabulary list, safety protocols, materials required, procedures, data analysis, student questions answer key, and conclusions and connections to spur wrap-up class discussions. Cross-curricular notes are also included to highlight the lesson's connection to subjects such as math and literacy. These online laboratory simulations enable students to make comparative observations, set up experiments, acquire data, and draw conclusions on a variety of topics. Each exercise is accompanied by suggested activities, a worksheet, a self-test for each exercise and module, and an instructor's answer key. This set of on-line laboratory experiments is designed within a simulation format to enable students to actually "do" science by acquiring data, performing experiments, and using that data to explain biological concepts or phenomenon. Students can do all this while working from their school's computer lab, dorm room desk top, or home computer. Instructors can use the virtual lab experiments to supplement the experience of a "wet" lab and to introduce biology students to the same techniques and equipment currently being used in many research laboratories. Online labs allow students to "use" expensive or otherwise unavailable laboratory equipment or supplies. VBL is also available via WebTutor where follow-up questions for each exercise and module are submittable to the Blackboard or the WebCT system. This allows instructors to evaluate the student's understanding of the lab they have completed. VBL does not need to be purchased in addition to Blackboard or WebCT--buying just the Blackboard version or the WebCT version provides access to all the modules and their content. There is no price difference to add WebCT or Blackboard. To see descriptions and/or demos of the 10 modules, visit http://www.brookscole.com/biology_d/vbl/. Visit the link to see the Genetics module in WebCT (<http://thomsondemo.webct.com/public/0534464955demo/index.html>) This breakthrough combination of current technology and traditional laboratory is a "virtual" experiment that can serve as either an alternative or a supplement to the traditional wet laboratory.
