El perfecto balance Nov 24 2022 "He escrito este libro desde mi corazón, con la esperanza de que más allá de las palabras y el intelecto, con ese órgano vital tú también lo recibas. Lo que está consignado en estas páginas da cuenta de una búsqueda de quince años para darle forma a un estilo de vida que hoy enmarca mi manera de pensar, de entender el mundo y de afrontar mi cotidianidad. Una manera de vivir que me hace sentir plena y en la que la prioridad es el respeto por todo lo que me rodea, empezando por todas las criaturas que habitamos este espacio irrepetible llamado Tierra". Con estas palabras Margarita Ortega entrega a los lectores este libro, el segundo después de su éxito editorial Regresa al origen. En él comparte sus vivencias y hallazgos en torno a la alimentación consciente, la salud, la actividad física y el bienestar espiritual. El libro enseña a leer las etiquetas de los alimentos e incluye deliciosas recetas de cocina natural y sin productos animales, fórmulas para preparar productos de belleza y para el hogar, y ejercicios de yoga y meditación, todos los cuales hacen parte del día a día de Margarita, quien hoy ha encontrado el perfecto balance entre su alimento, su cuerpo y su espíritu.

Breast Cancer: Scientific and Clinical Progress Feb 21 2020 Effective control of breast cancer depends on three types of research accomplishment -- understanding the disease's

origins and progression: successfully applying this knowledge to methods of detection, diagnosis and treatment: and finding ways to make these advances truly available to the public as effectively as possible. The significant progress that is occurring across this entire spectrum of pioneering investigation is reflected in these proceedings of the 1987 biennial conference of the International Association for Breast Cancer Research. The first section of the book focuses on oncogenes and chemical effectors that may play key roles in early cell transformation leading to breast cancer. Research discussed includes identification of specific oncogenes which appear to be involved in the disease, study of their activation and expression, examination of the biological effects of various growth factors isolated from breast cancer cell lines, and investigation of the molecular mechanisms by which estrogens promote and stimulate growth of breast cancers. The second group of chapters deals with several other complex factors and phenomena which may influence tumor formation in the breast, for example, expression of abnormalities by fibroblasts, disruption of epithelial-mesenchymal interactions, and loss of ability to synthesize normal basal lamina resulting in alterations in the extracellular matrix. Clarification of the processes of normal mammary gland development and differentiation is central to much of this work.

Index of Patents Issued from the United States Patent and Trademark Office May 06 2021

Weapons under International Human Rights Law Apr 17 2022 International human rights law offers an overarching international legal framework to help determine the legality of the use of any weapon, as well as its lawful supply. It governs acts of States and non-State actors alike. In doing so, human rights law embraces international humanitarian law regulation of the use of weapons in armed conflict and disarmament law, as well as international criminal justice standards. In situations of law enforcement (such as counterpiracy, prisons, ordinary policing, riot control, and many peace operations), human rights law is the primary legal frame of reference above domestic criminal law. This important and timely book draws on all

aspects of international weapons law and proposes a new view on international law governing weapons. Also included is a specific discussion on armed drones and cyberattacks, two highly topical issues in international law and international relations.

Mechanics of Biomaterials Jul 28 2020

Teaching mechanical and structural biomaterials concepts for successful medical implant design, this self-contained text provides a complete grounding for students and newcomers to the field. Split into three sections: Materials, Mechanics and Case Studies, it begins with a review of sterilization, biocompatibility and foreign body response before presenting the fundamental structures of synthetic biomaterials and natural tissues. Mechanical behavior of materials is then discussed in depth, covering elastic deformation, viscoelasticity and time-dependent behavior, multiaxial loading and complex stress states, yielding and failure theories, and fracture mechanics. The final section on clinical aspects of medical devices provides crucial information on FDA regulatory issues and presents case studies in four key clinical areas: orthopedics, cardiovascular devices, dentistry and soft tissue implants. Each chapter ends with a list of topical questions, making this an ideal course textbook for senior undergraduate and graduate students, and also a self-study tool for engineers, scientists and clinicians.

Visual Insights Mar 24 2020 A guide to the basics of information visualization that teaches nonprogrammers how to use advanced data mining and visualization techniques to design insightful visualizations. In the age of Big Data, the tools of information visualization offer us a microscope to help us make sense of the avalanche of data available on every subject. This book offers a gentle introduction to the design of insightful information visualizations. It is the only book on the subject that teaches nonprogrammers how to use open code and open data to design insightful visualizations. Readers will learn to apply advanced data mining and visualization techniques to make sense of temporal, geospatial, topical, and network data. The book, developed for use in an

information visualization MOOC, covers data analysis algorithms that enable extraction of patterns and trends in data, with chapters devoted to “when” (temporal data), “where” (geospatial data), “what” (topical data), and “with whom” (networks and trees); and to systems that drive research and development. Examples of projects undertaken for clients include an interactive visualization of the success of game player activity in World of Warcraft; a visualization of 311 number adoption that shows the diffusion of non-emergency calls in the United States; a return on investment study for two decades of HIV/AIDS research funding by NIAID; and a map showing the impact of the HiveNYC Learning Network. Visual Insights will be an essential resource on basic information visualization techniques for scholars in many fields, students, designers, or anyone who works with data.

The Southern Textile Basketball

Tournament Feb 15 2022 In 1905 Lawrence Peter Hollis went to Springfield, Massachusetts, before beginning his job as the secretary of the YMCA at Monaghan Mill in Greenville, South Carolina. While there, he met James Naismith, the inventor of basketball, and learned of the fledgling game. Armed with Dr. Naismith's rules of the game and a basketball he bought in New York, Hollis returned to the mill and changed the face of athletics in South Carolina. Lawrence Peter Hollis was one of the first to introduce basketball south of the Mason-Dixon line, and the game quickly gained popularity in the textile mill villages throughout South Carolina. In 1921 Hollis and others organized a tournament to determine the best mill team, and thus the southern Textile Basketball Tournament was born. Over the years, some of the south's top cage talent played in the tourney, including "Smokey" Barbare, Lucille Foster Thomas, Bert Hill, Earl Wooten, Billy Cunningham, Pete Maravich, Sue Vickers and Tree Rollins. Decade-by-decade, the history of one of the longest running basketball tournaments is provided, along with profiles of many prominent participants. Full rosters for all teams in all tournaments are given in the appendices, along with all-tournament selections and members of the Southern Textile Athletic Hall of Fame.

Radionuclide Imaging of the Breast Jan 02 2021 Demonstrating the role of nuclear medicine as a complementary technique to mammography and other imaging modalities for the diagnosis of breast cancer, Radionuclide Imaging of the Breast provides a comprehensive overview of scintimammography—an accurate, safe, and noninvasive imaging method for the evaluation of breast lesions and malignancies. Reveals the encouraging results of multicenter clinical trials in the U.S. and Canada using 99mTc sestamibi breast imaging for the diagnosis of primary breast carcinoma! Addressing nonsurgical sampling of nonpalpable breast lesions as an effective means of providing diagnostic and prognostic information, Radionuclide Imaging of the Breast discusses increasing the diagnostic value of mammography and its widespread use examines the reliability of FDG-PET and FDG-SPECT in detecting lymph node involvement and distant metastases reviews breast cancer imaging with monoclonal antibodies, including murine and bioengineered antibodies compares the benefits and limitations of Thallium-201 to 99mTc-sestamibi breast imaging in evaluating suspected malignancy assesses the clinical impact of scintimammography as an adjunctive test to mammography to improve the dependability of diagnoses considers the possibility of replacing axillary lymph node dissection in patients with small breast cancers with the sentinel node approach clarifies the importance of surgery in the multimodality treatment of breast cancer elucidates pathologic difficulties for breast cancer diagnosis and more! Radionuclide Imaging of the Breast serves as an essential reference for nuclear medicine physicians, radiologists, breast surgeons, medical and surgical oncologists, gynecologists, pathologists, internists, and primary care physicians.

Breast Cancer: Origins, Detection, and Treatment Apr 05 2021 The control of breast cancer, a leading cause of cancer death in women, will depend ultimately on our understanding of the disease--its origin, and progression which in turn will permit the effective management of its treatment, its detection, and perhaps even its prevention. It is for a better understanding of this spectrum of biological processes crossing back and forth across scientific and clinical disciplines that this volume strives. Several broad topics have been addressed in organizing a large mass of work representing state of the art updates from many of the major breast cancer research groups around the world. The chapters in the first section speak to the factors affecting the growth and development of normal and malignant mammary epithelium. Special emphasis is placed on insights drawn from developmental biology, the cellular interactions that occur in the mammary gland during growth and differentiation; and the study of hormones and growth factors in the regulation of growth and differentiation of normal and malignant breast tissues. In the section on the biology of breast cancer, there is a characterization of relevant model systems for the study of breast cancer and their contribution to our understanding of preneoplasia and progression in mammary cancer. Included as well is the current status of major studies on the immunological aspects of breast cancer and the latest efforts in the development of markers for metastasis in breast cancer.

Conflicts of Interest and the Future of Medicine Apr 24 2020 Offers a comparison of medical practices in the United States, Japan, and France and the variations of type and prevalence of physicians' conflicts of interest.

Medical Technicians Bulletin Mar 04 2021
Incapacitating Biochemical Weapons May 18 2022 Incapacitating Biochemical Weapons examines the promise and peril behind weapons based on natural or synthetic biochemical

compounds that are meant to cause rapid incapacitation but not to kill. An agent has yet to be found that can effectively incapacitate people without risk of death when used in a real-world military or law enforcement situation. But revolutionary advances in the life sciences and biotechnology are generating new knowledge and potentially greater capabilities for manipulating human consciousness, emotions, mental functions, and behavior. These advances, coupled with the changing nature of conflict and warfare in the 21st century, are generating renewed government interest in incapacitating biochemical weapons. Governments, international organizations, and society as a whole have critical decisions to make about whether and how to pursue the development, or conversely the effective prohibition, of incapacitating biochemical weapons. This book provides a comprehensive survey of the scientific, military, humanitarian, legal, and political issues associated with the development and use of incapacitating biochemical weapons. The expert contributing authors explore a wide range of issues pertinent to the topic from science to history to current military interest, arms control, and international law. Incapacitating Biochemical Weapons: Promise or Peril? will be of interest to scientists, the military and law enforcement communities, policy-makers, and all who are concerned about the proliferation of such weapons.

Rutgers Since 1945 Nov 12 2021 "Spans the period from World War II to the present during which Rutgers grew from two small, liberal arts colleges, an agricultural school, and an engineering school into a major public research university. We chronicle the remarkable story of Rutgers's rise as a research university, but also the way the school has been experienced by generations of students and residents of the state. The Cold War, the student protests of the 1960s and the 1970s, the rise of identity politics on campus, big-time athletics, and the various

ways students have shaped and been affected by popular culture all play a part in this story. Three chapters cover chronologically the major changes that occurred at the university between 1945 and the present, bringing up to date the work done in Richard P. McCormick's, Rutgers, A Bicentennial History (1966). The remaining chapters provide snapshots of some of the key themes in the contemporary history of the school -- campus life and campus activism, the school's growing strength as a research institution, the impact of Title IX on opportunities for women student athletes, the school's public presence as reflected in such long-standing institutions as the University Press, the Glee Club, and undergraduate journalism. Rutgers current residence halls, which house more students than at any other college in the nation, are the subject of a imaginatively illustrated, architectural analysis While much of the focus of our study is on the New Brunswick/Piscataway campus, attention has been paid throughout to Camden and Newark as well"--

Photodynamic Therapy of Neoplastic Disease

Sep 10 2021 This two-volume text provides a summary of studies relating to the use of photosensitizing agents in the diagnosis and therapy of cancer. This interesting work describes synthesis of new sensitizers, photochemical and photobiological properties of dyes currently used for photodynamic therapy, plus those being examined with a view toward providing therapeutic advantages. It contains results and methodology from leading experts on the use of porphyrins and other photosensitizers for detection of neoplastic disease and for photodynamic therapy of neoplastic disease. The volumes focus on the major clinical and pre-clinical research groups. They also include an appended bibliography which lists all pertinent publications in this field. This easy-to-understand book is written for all workers in the field of photodynamic therapy and provides an introduction to those beginning research on some aspect of tumor photosensitization.

Terapia Gerson Jun 19 2022 EL LIBRO QUE AHORA TIENES EN TUS MANOS PODRÍA SER EL MEDIO PARA CONSERVAR TU SALUD, O PARA RECUPERARLA SI ESTUVIERAS ENFERMO. Durante su juventud, el doctor

Gerson descubrió que había terminado con sus terribles problemas de migraña mediante una dieta especial. Cuando la recetó, algo extraordinario comenzó a suceder: su paciente volvió a consulta un mes después y no sólo no tenía migraña, sino que una tuberculosis cutánea "incurable" (TB Vulgaris) que también padecía estaba en proceso de desaparecer. Así, el doctor Gerson dio con la terapia Gerson. Los pacientes de cáncer u otras enfermedades consideradas incurables, deben leer este libro. Toda persona que quiera gozar de buena salud, debe leer este libro. • La terapia Gerson está basada en una nutrición natural y holística. • Ochenta años de múltiples casos comprobados y archivados demuestran que el doctor Gerson estaba en lo correcto. • La terapia Gerson atiende los problemas de salud de forma integral, sin concentrarse en un solo síntoma, órgano o sistema, como si fueran independientes del resto del cuerpo. • Este libro explica cómo funciona la terapia Gerson, e instruye sobre la forma de llevar el tratamiento con toda efectividad. • Esta terapia es una esperanza para quienes padecen cáncer, depresión, asma, reumatismo, hepatitis, o alguna otra enfermedad "incurable". A finales de 2006, Alan Furmanski fue diagnosticado con melanoma, uno de los cánceres más agresivos y letales. En 2007 se sometió a dos cirugías, y en abril de ese mismo año reaparecieron más de 20 tumores en su cuero cabelludo. Entonces, Alan decidió abandonar la medicina moderna e iniciar la terapia Gerson. Hoy no tiene rastro de cáncer en su cuerpo. Actualmente dirige su propia empresa para ayudar a otros "incurables" a curarse.

Alimentos anticáncer Oct 23 2022 En estas últimas décadas el cáncer ha ido creciendo de forma espectacular en los países "desarrollados". Su incidencia va en aumento y se calcula que una de cada tres personas, nada menos, lo padecerá a lo largo de su vida. Muchos cánceres están causados directamente por la alimentación: la basada en comida rápida y procesada, las grasas trans, los alimentos azucarados y refinados, etc. La buena noticia es que se conocen ya muchas de las sustancias que pueden inhibirlos y los alimentos que las contienen, como las frutas y verduras frescas (arándanos, granada, limón, açai, remolacha,

ajos, coles...). Nunca es demasiado tarde para empezar a hacer cambios saludables y protectores que pueden retardar o detener el proceso. Una alimentación adecuada y ciertos cambios en el estilo de vida pueden frenar esta enfermedad. • Los alimentos antiinflamatorios: ajo, cebolla, uva roja, pescado azul, frutos secos, semillas... • La estrecha relación entre la glucosa y el cáncer. • ¿Qué sustancias producen los temibles "radicales libres"? • Zumos detox y terapia Gerson. • Las plantas y la medicina naturista. • La sinergia de los alimentos.

Parallel Computing on Distributed Memory Multiprocessors Jan 22 2020 Advances in microelectronic technology have made massively parallel computing a reality and triggered an outburst of research activity in parallel processing architectures and algorithms. Distributed memory multiprocessors - parallel computers that consist of microprocessors connected in a regular topology - are increasingly being used to solve large problems in many application areas. In order to use these computers for a specific application, existing algorithms need to be restructured for the architecture and new algorithms developed. The performance of a computation on a distributed memory multiprocessor is affected by the node and communication architecture, the interconnection network topology, the I/O subsystem, and the parallel algorithm and communication protocols. Each of these parameters is a complex problem, and solutions require an understanding of the interactions among them. This book is based on the papers presented at the NATO Advanced Study Institute held at Bilkent University, Turkey, in July 1991. The book is organized in five parts: Parallel computing structures and communication, Parallel numerical algorithms, Parallel programming, Fault tolerance, and Applications and algorithms.

Innovation, Dual Use, and Security Aug 09 2021 A framework for assessing the security risks of emerging dual-use technologies and devising tailored governance strategies is proposed and applied to contemporary case studies.

Immunological Approaches to the Diagnosis and Therapy of Breast Cancer Jul 08 2021

Once again we have gathered to discover and evaluate advances made in our ability to understand, diagnose and possibly treat breast cancer with the new reagents provided by monoclonal antibody techniques. In the last two years since our first International Workshop on Monoclonal Antibodies and Breast Cancer there has been an enormous surge in the number and quality of applications for these new reagents. Solid achievements have been made in identification and quantitation of estrogen and progesterone receptors, in histopathological diagnostic procedures, in serum diagnosis, and we are witnessing now the first attempts to treat breast cancer with immunoconjugates. Cytosolic estrogen receptors can now be quantitated with monoclonal antibodies, and also their cellular distribution can be directly assessed histologically. In addition, monoclonal antibodies to progesterone receptors have been generated that show promise in having similar uses as those to the estrogen receptor. In the field of diagnosis, the use of monoclonal antibodies has permitted the development of serological approaches for early diagnosis by identifying and measuring breast epithelial antigens in serum, and of histological approaches for establishing criteria for breast cancer dissemination and prognosis. With great expectations we are all following developments in the area of breast cancer treatment using conjugates of anti-breast epithelial monoclonal antibodies which are now confirming earlier reports in affecting breast tumor control. The recent creation of newer monoclonal antibodies and conjugates await experimentation and clinical trials to determine their value.
